

Faster Revenue Recovery. Greater Precision.

How Revecore Puts AI to Work Across the Recovery Lifecycle

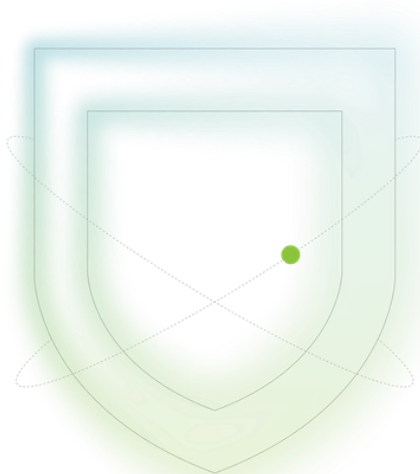

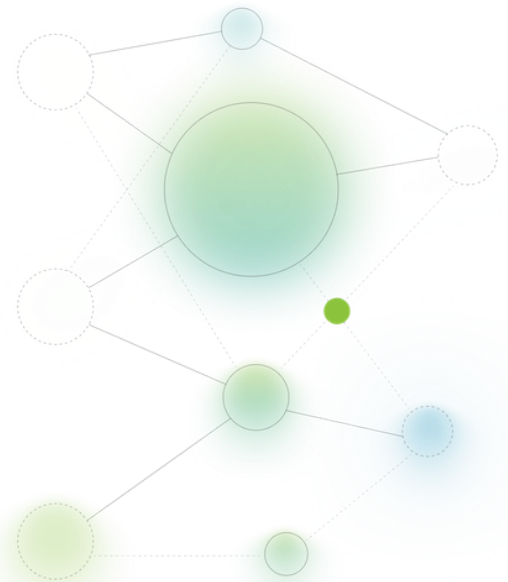

Why Does AI in RCM Matter?

Revenue cycle has always been complex — but today, payers are deploying AI to process, flag, and deny claims faster than traditional workflows can respond. The health systems that close that gap will be the ones that match that sophistication with AI purpose-built for recovery.

Our AI Philosophy

At Revecore, our AI philosophy is grounded in a human-centered, accountable, and outcomes-driven approach. We design AI to augment expert judgment — not replace it — ensuring critical decisions remain transparent, explainable, and governed by experienced professionals in alignment with our AI Ethics Policy.

Our technology investments combine advanced automation, AI, and data intelligence with Revecore's industry-leading expertise in complex claims, denials, and underpayment recovery. By automating routine tasks, identifying patterns, and surfacing actionable insights, AI enables our teams to work more efficiently and focus their expertise where it creates the greatest value.

In revenue cycle management, successful outcomes depend on nuance. Clinical complexity, contract interpretation, payer behavior, and evolving regulatory requirements all require informed judgment and contextual understanding. While AI can accelerate analysis, prioritize work, and support decision-making, experience remains essential.

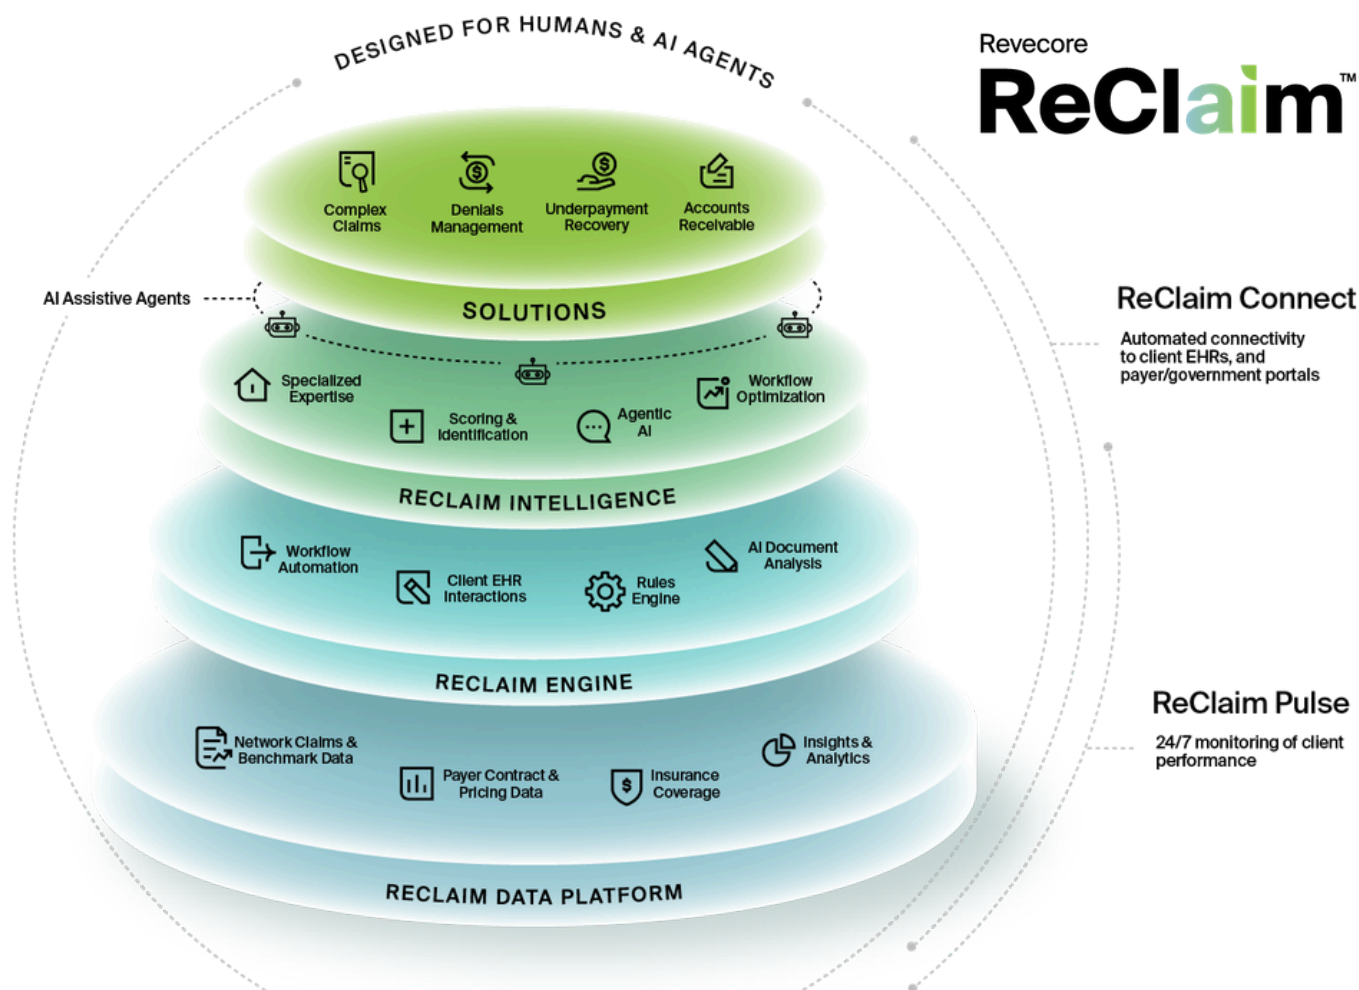

That is why we invest in AI that enhances the effectiveness, consistency, and scalability of our experts — helping clients recover more revenue, resolve issues faster, and achieve better financial outcomes while maintaining accountability at every step.

Every AI capability in Revecore's ReClaim™ platform is built with one mission:
get the right revenue, faster — with expert review behind every output.

Our AI and data science capabilities are purpose-built to handle the repetitive, data-intensive dimensions of the recovery process — analyzing high volumes of claims data, identifying patterns, scoring opportunities, and optimizing workflows. This frees our analysts, clinicians, and legal experts to focus their expertise where it matters most: making informed decisions, resolving complex cases, and driving maximum recovery.

The result is a tightly integrated model where:

- AI brings speed, scale, and precision
- Experts bring judgment, context, and accountability

User Experience

ReClaim's headless architecture supports both human analysts and AI agents

ReClaim Intelligence

Specialized claims expertise, rules & scoring, agentic AI, workload optimization

ReClaim Engine

Workflow automation, EHR interactions, AI document analysis

ReClaim Data Platform

Payer benchmark data, insurance coverage, insights & analytics

Intelligent, Adaptive Revenue Recovery.

Revecore is applying AI, ML, and advanced automation to recover more revenue, faster and with greater precision.

Intelligent prioritization

ML models analyze millions of claims to prioritize the most complex and financially impactful for our clients.

Scalable, efficient recovery model

Revecore's AI enables a structured, repeatable approach to recovery without sacrificing accuracy or control.

Automation that accelerates cash

AI streamlines workflows from intake through resolution – reducing manual effort and cycle times.

Continuous learning

AI models evolve with every claim and payer interaction – improving accuracy and overall performance over time.

AI-Driven Revenue Intelligence.

Delivering measurable financial outcomes and long-term revenue resilience to hospital systems nationwide.

79%

Reduction in VA serviceline average days to bill

6-7%

Incremental YoY uplift in underpayment collections

2x+

Acceleration in processing clinical appeals

750M

Claims (and counting) driving every data insight

COMPLEX CLAIMS

Complex Workflow Automation.

Workflow rules covering state-specific, federal, and payer-specific logic for Auto/TPL, Workers' Compensation, and VA claims.

Context-aware rules engine

80,000 jurisdiction-specific billing and compliance workflow rules covering state-specific, federal, and payer-specific logic

Intelligent claims routing

Automated claim identification with routing to Auto, WC, or VA specialists

Coverage identified in seconds

Revecore's Proprietary Accident Payer Search (APS) engine to identify applicable coverage within seconds

Compliance built in

VA Community Care billing rules, TRICARE compliance, and WC-specific EDI and attachment handling

DENIALS

Automated Denial & Appeal Workflows.

Intake and triage automation that frees clinical team capacity, with AI-assisted record analysis accelerating appeal drafting.

Automated denial categorization

Response playbooks built on payer codes and CARC/RARClogic

Embedded policy libraries

MCG, InterQual, and payer-specific criteria built in

AI-drafted, human reviewed

Payer-specific appeal letter generation, drafted by AI and reviewed by clinicians

50%+ faster appeals

Delivering 50%+ acceleration in appeal drafting speed

ACCOUNTS RECEIVABLE

AI-Powered Prioritization.

Rule-based assignment logic and AI-driven prioritization ensure every claim receives the right expert attention.

Intelligent claim assignment

Automated intake and triage, rule-based assignment logic, and AI-driven prioritization

Workflow enforcement

Structured enforcement with triggered escalations and follow-up intervals

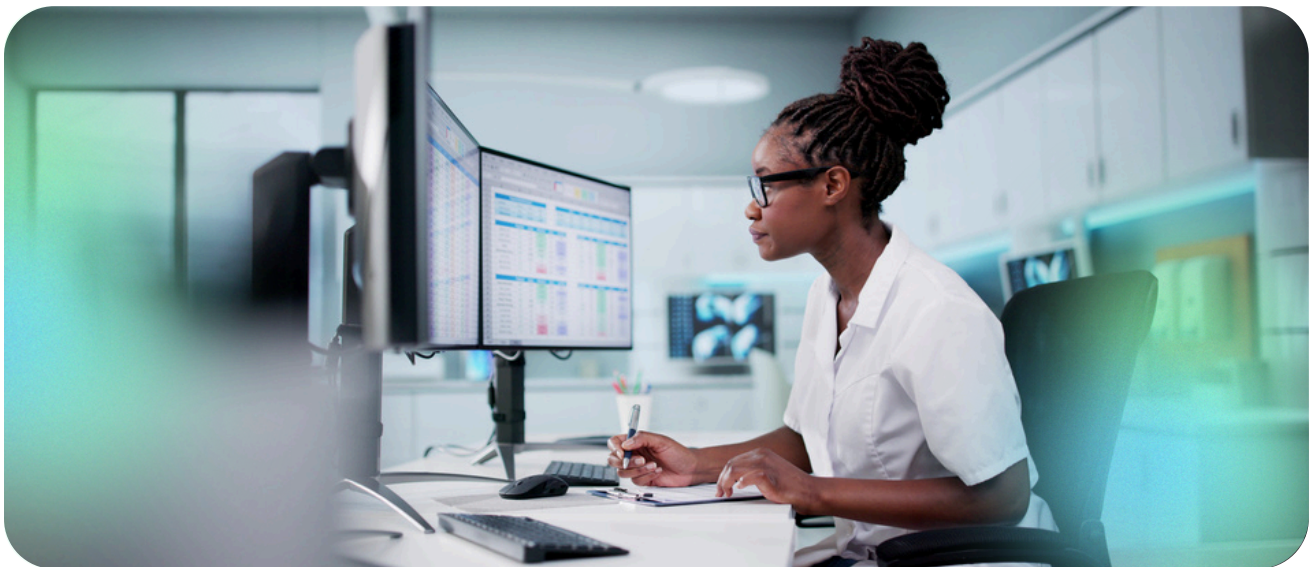

Performance reporting

Liquidation performance, aging trends, and payer behavior patterns

Right expert, every claim

Every claim automatically routed to the expert best positioned to resolve it

UNDERPAYMENTS

Identification & Recovery Engine.

Scale-driven identification combined with technology-enforced scope control aligned to client priorities.

2,000+ proprietary rules

Informed by national payer behavior and historical recovery outcomes

ML-based prioritization

Ranked by recovery likelihood, financial impact, and payer behavior

Closed-loop feedback

Surfaces emerging payer patterns before they scale

6-7% YoY uplift

Closed-loop feedback drove 6-7% year-over-year uplift

MASTERING REVENUE CYCLE COMPLEXITY

Faster Revenue Recovery. Greater Precision.

AI that prioritizes, detects
and accelerates recovery.
